Assets / Facts / Imagery

Your AI universe in one touch!

A simple, persistent home for your personal team of AI agents, your “**Vrse.**”

One life. A team of agents.

Computing moved from rooms to desks to pockets. VrseOS asks what comes next: a personal compute platform that moves with you.

Your Vrse is your persistent space for agents, devices, memory, and the things that matter to you. You set the direction.

THE FILM

1984, revisited

Our 1984 film honors the creators of Apple's landmark commercial and asks what personal computing could become next. It is a creative statement, not a confirmed release announcement.

The background of the entire image is a cinematic scene of a futuristic city at sunset. In the foreground on the right, a silhouette of a conductor in a top hat and long coat is seen from behind, holding two batons. The city in the background features tall, spire-like buildings and a sky filled with flying drones. A large crowd of humanoid robots is gathered in the lower half of the frame, looking towards the city. The overall color palette is dominated by warm oranges, yellows, and dark blues.
